shorthorn

Black
has met its match

Shorthorn breeders and their customers are learning how cost effective it is to benefit from heterosis. Shorthorn is the complete package when used in a composite breeding program. No other breed will allow you to maintain marbling, improve yield grades, and increase feed efficiency while also creating a female with strong maternal traits.

Black has met its match

Shorthorn is a leader in the showing with the largest breed show at the North American International Livestock Expo and having one of the largest and strongest Junior programs! Shorthorn has the docility you have been wanting for your junior's project and your cow herd. Take advantage of Shorthorn's fun, educational and profitable opportunities on your way to the winners circle.

shorthorn

Black has met its match

Shorthorn females have long been sought after for having excellent maternal traits including early maturity, fertility, ease of calving, milk production, longevity and lets not forget docility. Docile cattle are not just about safer handling, but they are more efficient eaters, have better response to vaccinations and preconditioning, and now sources correlate calm cow temperament with a tender carcass quality. Whether you are looking for efficient producers in the pasture or the feedlot, Shorthorn genetics can adapt to your situation.
